The St Davids Pollinator Trail

Nestled within the Pembrokeshire Coast National Park is St Davids - the smallest city in the UK. But St Davids is not the only small thing around here! Buzzing and fluttering amongst gardens, meadows, homes and businesses are thousands of small, but very important little creatures...

Insect pollinators move pollen from one plant to another, enabling the plant to produce seed and fruit. Much of the food we eat relies on this process. However, many insect pollinators are in trouble! Over 250 species are now in danger of extinction and they need your help to provide them with food, shelter and safe places to live.

The St Davids Pollinator Trail is here to celebrate the wonderful world of insect pollinators and to help you learn more about them. We hope to highlight some wonderful places to visit in St Davids and provide some simple ways in which you can help look after the wildlife that resides here.

Trail guidelines

Choose your Trail: City, Explorer or both!

The City Trail is based within the centre of St Davids and can be completed on foot. The Explorer Trail extends a little further across the St Davids peninsula. Most people will need a car or bike to complete this route but it is possible to walk too! Just make sure you are prepared.

Plan your route

Postcodes and grid references are provided for each site. To use the grid references download the free Ordnance Survey app. Alternatively you can use a traditional paper Ordnance Survey map. There is no set route and no time limit in which to complete the Trails. Just make sure to enjoy the beautiful sights of St Davids and keep an eye out for wildlife along the way! You can enjoy the Trails in a day, over a week or even a year, it is completely up to you. Where applicable, please visit stations during public opening hours - see The St Davids Pollinator Trail webpage: www.thebugfarm.co.uk/pollinator-trail

Prize draw

Make sure to find the answer to the Bug Brain Teaser at each site and record it in this spotter guide. Collect all the answers for the City and/or Explorer Trails and you can be entered into a prize draw. See www.thebugfarm.co.uk/pollinator-trail for further details. Just return with your spotter guide to The Bug Farm, so they can verify your answers and enter you into the draw.*

* The answer to the Bug Brain Teaser for any site without disabled access is not required to enter the prize draw.

Take care

You are responsible for the safety of yourself and your party. Crossing a road safely is more important than finding a board or a Bug Brain Teaser answer. Please respect the property and privacy of others, including the pollinators! Make sure to put any rubbish in a bin or take it home with you.

What's on the Trail?

The first thing to spot is an information board All about a pollinator that should be adored Brimming with facts and a figure or two Answer the Brain Teaser and learn something new...

Now open your eyes, what bugs can you see? Maybe butterflies, beetles or even a bee? Pollinators are everywhere, sometimes hiding away But show themselves best on a nice sunny day.

So where do they live and what do they eat? Pollinator habitat is often under your feet Flowers are a favourite for dinner on the go Homes can be a tussock, wall or hedgerow.

The fourth thing to spot on the Trail today Is a Welsh work of art, hip hip hooray! Paintings and pictures a sculpture perhaps Find them all with the help of your maps!

The Pollinator Trail is a challenge for sure The boards may be hidden, the bugs even more But don't give up, keep your eyes peeled Life in the undergrowth can now be revealed!

Example information board

Pollinators in Britain

In Britain there are...

220+
species of solitary
bee

1500
species of insect
pollinator

24
species of
bumblebee

1
species of
honey bee

59
species of
butterfly

275+
species of
hoverfly

100+
species of beetle
pollinators

Sadly our pollinating insects are in decline because they haven't got enough food or safe places to live.

97%
of British wildflower
meadows have been
lost since the 1930's
(that's an area
1.5 x the size of Wales)

76%
of British butterflies
have declined in the
last 40 years

66%
of larger moths
have declined in the
last 40 years

250
British pollinators are in danger of extinction.

Welsh works of art

At each site on The Pollinator Trail, we are delighted to display a piece of Welsh artwork. Each piece has been created especially for the Trail and influenced by the pollinator showcased at the site. This linking of art and science can help to inspire a wide range of people. Here, creativity meets conservation!

For more information about these artists and their work please see the Pollinator Trail webpage www.thebugfarm.co.uk/pollinator-trail

Help insect pollinators

1. Plant a pot with flowering plants

Look out for the RHS 'Plants for Pollinators' stamp.

2. Leave a 'weedy patch' in your garden

Many butterflies will only lay their eggs on stinging nettle.

3. Mow your lawn less often!

Butterflies lay eggs in long grass while dandelions and clovers provide food for lots of bees and hoverflies.

4. Reduce use of pesticides and herbicides

Many chemicals can harm pollinators.

5. Create a bee or 'bug' hotel

This will provide nest sites for bees and homes for beetles.

In May 2018 St Davids became the first Bee Friendly City in Wales.

Check out Wales' Action Plan for Pollinators webpage to see if you could make your school or business Bee Friendly too!

This project has been coordinated by Dr Beynon's Bug Farm. It is part funded via the Welsh Government's Tourism Product Innovation Fund which aims to encourage new innovative product ideas working in partnership which will have a greater impact and attract more visitors. The Pollinator Trail has also been supported by Biodiversity Solutions.

These spotter guides are also available in Welsh. Download your copy from the Pollinator Trail webpage: www.thebugfarm.co.uk/pollinator-trail

These guides are printed on recycled paper with biodegradable inks. Please recycle after use.

The power of pollinators!

1 in 3
mouthfuls of food we eat relies on
insect pollinators

Without pollinating insects we wouldn't have food and drink such as ...

**strawberries,
chocolate & coffee**

Insect pollination in Britain is
valued at up to

£600 million

If humans had to pollinate our crops
by hand, it would cost us

£1.8 billion
